

## JavaScript Debugging Checklist

Student Name: \_\_\_\_\_ Date: \_\_\_\_\_

**Check off each step while debugging your code**

### 1. Read the error message carefully

- ☐ Look at the type of error
- ☐ Note the line number the browser points to

### 2. Check for syntax errors

- ☐ Are all quotes closed properly?
- ☐ Are all parentheses () balanced?
- ☐ Are all curly braces {} closed correctly?
- ☐ Did I use semicolons consistently?

### 3. Look for typos

- ☐ Variable names are spelled exactly the same everywhere
- ☐ Function names match their calls

### 4. Check variable definitions

- ☐ Is every variable declared before it is used?
- ☐ Did I use let, const, or var correctly?

### 5. Check assignment vs comparison

- ☐ Did I accidentally use = instead of == or ===?

### 6. Use console.log() to debug

- ☐ Print variables to see their values
- ☐ Check that functions return what you expect

### 7. Fix one error at a time

- ☐ Start with the first error the console shows
- ☐ Refresh and check for new errors after each fix

### 8. Ask yourself questions

- ☐ Did I spell all variables and functions correctly?
- ☐ Are my quotes and parentheses balanced?
- ☐ Am I comparing values correctly?

## 9. Take breaks and re-read

- ☐ Step away for a few minutes if stuck
  - ☐ Re-read your code carefully with fresh eyes
- 

### Extra Tools (Optional):

- Browser Developer Tools (F12 → Console)
- Code editor with syntax highlighting (e.g., VS Code)
